WHY CLINICIANS CHOOSE METRIKS

- **Built around clinical reasoning.** Learn why and when to use tests - not simply how to follow a fixed protocol.
- **Designed for real FCE delivery.** Test selection, safety, findings, interpretation and reporting are taught as one connected process.
- **Decades of FCE training experience.** The methodology reflects experience training thousands of PTs, OTs, Kins and DCs across North America since the mid-1990s.
- **Academic-level credibility.** Metriks FCE principles are integrated into programs at the University of Guelph-Humber, Brock University and Lakehead University.
- **Flexible online learning.** Approximately 13 hours of self-paced, on-demand education designed to fit around clinical schedules.

THE DIFFERENCE

Learn the reasoning behind the assessment - not just the test procedures.

Metriks focuses on the decisions that make an FCE defensible: what to test, how far to progress, when to stop, what the findings mean, and how to connect capacity to occupational demands.
