

Life Changing Innovation

Aspen Summit_™ Lower Spine Braces

The Aspen Summit line of inelastic braces are designed to help limit motion, providing a controlled environment for healing. Choose from the Summit 456 TLSO, Summit 637 LSO and Summit 631 LSO based on the degree of motion restriction required. Each Summit brace is available as a one size adjustable or the original sized versions.

One Size Adjustable

Comfortably fits waists ranging from 26 to 60 inches and up to 70 inches with the extension panel. The innovative Sure Slot^w sizing mechanism offers multiple sizes in one brace, enabling each brace to comfortably fit various patient shapes and sizes. One size adjustable means the correct size is always on hand, minimizing inventory requirements and significantly reducing costs.

Aspen Acute Restriction Braces Provide a Controlled Environment for Healing

Aspen Acute Restriction braces provide significant motion restriction by acting as a kinematic restrictor¹ for patients needing additional support for healing, and can be safely and quickly applied. Gross motion restriction is often desired in treating injured patients recovering from trauma or surgery.² The goal is to support healing,³ limit recovery time and save money by expediting patient discharge times, accelerating turnaround times and minimizing health risks.

The Aspen Advantage Symbol

An Innovative Feature Available only from Aspen

Custom Support 🚯

When tightening, the firm but flexible back panel naturally conforms to the patient's lordosis to provide added structural support.

Integrated Anterior Panels 🔬

Anterior panels at each end of the brace overlap to provide added midline support. Featuring Aspen's innovative FlexTabs..., these panels disperse pressure and naturally conform to each patient's anatomy for increased comfort.

Easy Access for Modification

Unique sizing mechanism allows for quick and easy adjustment, without

Sure Slot_™ System ∢

the use of tools.

All structural components are easily removed and can be heat molded, bent or trimmed to accommodate individual patient conditions.

Reliable Structural Integrity 🕢

Tri-band technology system and integrated vertical stays provide stability and structural integrity for a contoured fit.

Advanced Inelastic Compression 🕢

Aspen's Super SlickTrack_™ System features an independent upper and lower tightening mechanism, providing direct compression where needed to support tight muscles, regardless of patient's strength.

Height Adjusts for Every Body

Telescoping shoulder straps on the Summit 456 TLSO provide 13 inches of height adjustment to fit varying patient anatomies. In addition, circumferential adjustability enables a customized fit for every body.
